THE PROBLEM

Medicines cannot afford guesswork

Expired stock

Short-dated medicines sit unnoticed in the warehouse and end up written off.

Slow recalls

Tracing one batch across suppliers and customers takes days on paper.

Late collections

No credit control, so receivables grow beyond what the business can carry.

Cold-chain risk

Insulin and vaccines stored with normal stock lose potency and safety.

Spreadsheets and paper = no single source of truth

Pharma Bridge needs one system where every box, batch and payment is tracked from vendor to pharmacy.

THE COMPANY

Pharma Bridge at a glance

Pharma Bridge is an Egyptian pharmaceutical distributor. It buys medicines from manufacturers and supplies pharmacies, hospitals and sub-distributors across Egypt.

Customers: pharmacy chains, hospitals, regional sub-distributors

Vendors: Sanofi, GSK, Novartis, EVA Pharma, Hikma and more

Products: antibiotics, cardio, diabetes, GI, respiratory, vitamins and cold-chain insulin

30

Medicines tracked by lot

15

Customers with credit limits

8

Vendors

3

Storage zones: Main, Cold, Quarantine

THE SOLUTION

One connected system, vendor to pharmacy

Purchase > Receiving QC > Inventory Lots + FEFO > Sales > Delivery > Invoice + Payment

CRM

Pipeline and visits for medical sales reps

Accounting

Average cost, perpetual valuation, receivable aging

Quality

Pass / Fail inspection on every receipt

Reporting

Dashboards for sales, stock, expiry and collections

Standard Odoo 19 configuration only. No custom code.

STAKEHOLDERS

Who the system serves

Manage closely

General Manager, Warehouse Manager, Quality Officer, Sales Manager

Keep satisfied

Health authorities, Purchasing Manager

Keep informed

Medical reps, Accountant, Customers, Suppliers

Monitor

IT administrator

High power / high interest sits top-left; each group gets its own training and communication plan.

KEY FEATURES

Built for how medicines are really handled

FEFO picking

First-expiry-first-out reserves the nearest-expiry lot automatically on every delivery.

Lots and expiry

Every medicine tracked by lot with expiry, best-before, removal and 90-day alert dates.

Cold chain

Dedicated Cold Storage (2-8 C) with putaway rules that route insulin there on receipt.

Quality gate

Receiving inspection with Pass / Fail; failed batches go to Quarantine.

Credit control

Per-customer limits from 7,000 to 100,000 EGP, default 20,000, with order blocking.

Smart pricing

Hospital and distributor pricelist: 10% from 50 units, 15% from 200 units.

ORDER TO CASH

FEFO and credit control in action

1. **Sale order**
   Credit limit checked at confirmation

2. **Delivery**
   Reserves the earliest-expiry lot

3. **Invoice**
   Average cost and perpetual valuation

4. **Payment**
   Customer balance updates instantly

Augmentin 1g | 100 units received

LOT-2026-A	50 units	Exp 31/12/2026	**SHIPS FIRST**
LOT-2027-B	50 units	Exp 30/06/2027	**SHIPS SECOND**

Credit limit protection

12,000 EGP order vs 10,000 EGP limit (El-Ezaby Pharmacy)
Result: order blocked before delivery

TRACEABILITY

A recall answered in minutes, not days

1 Detect

A supplier reports a problem with one lot

2 Trace

Open the lot and see its full movement history

3 Identify

List every customer and quantity delivered

4 Contain

Move remaining stock to Quarantine and notify

Audit trail

Every receipt, transfer and delivery is logged per lot

Expiry records

Expiry dates stored on each lot with alerts

Cold-chain records

Temperature-zone stock kept in its own location

DATABASE DESIGN

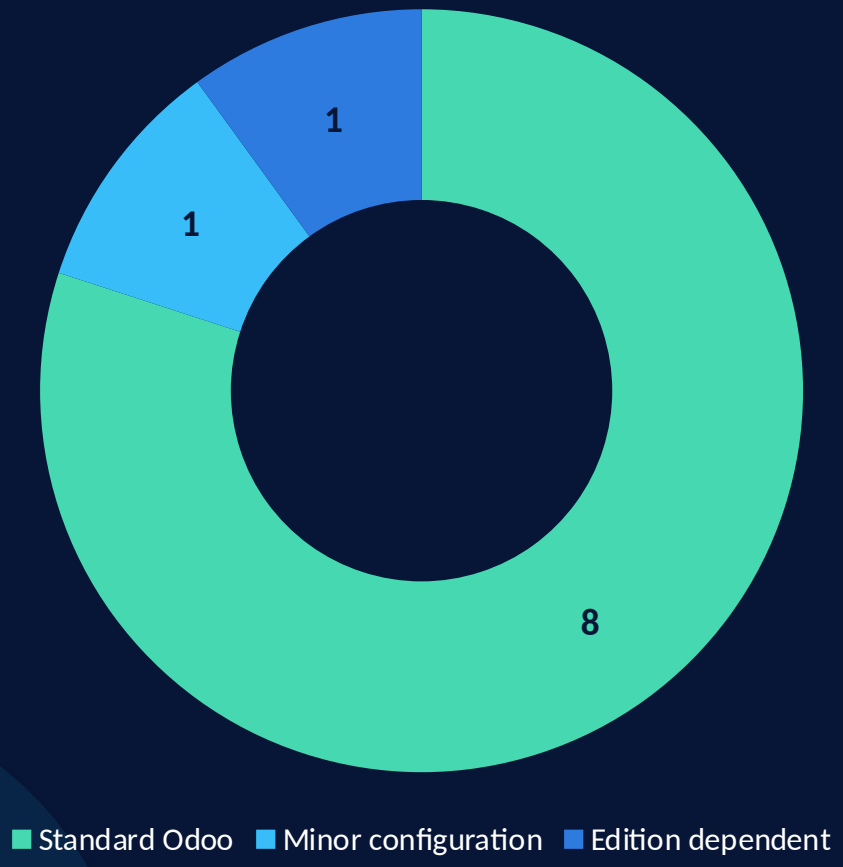

How the data connects

Quality checks attach to receipts; stock quants link each lot to its location (Main, Cold Storage, Quarantine).

VALIDATION

Standard fit and tested end to end

10 requirements analysed (Fit-Gap)

10 UAT scenarios cover the whole business:

Receiving with lots | FEFO picking | Expired lot protection

Credit limit | Quality check | Cold storage

Invoice and payment | Traceability | Access rights | Reordering

Zero custom code

Everything is configuration, so upgrades stay simple.

ROADMAP

From project to production

Delivered

Core ERP: purchase, inventory with lots and FEFO, sales, accounting, quality, CRM.

Next

Egyptian e-invoicing with the tax authority and drug track-and-trace integration.

Then

Barcode scanning on mobile devices for receipts and deliveries.

Future

BI dashboards and demand forecasting with machine learning to cut expiry losses.

Training per role, a one-page user guide, and a first-two-weeks support plan are part of go-live.
